

Advanced Analytics for Clinical Studies

The advanced analytics dashboard, a point-and-click interface, provides rich R&D information and insight that enhances product development activities for a key Fortune 500 clients that was previously having difficulties manually linking information. The Advanced analytics techniques enable analysis across multiple studies as well as the integration of R&D data (raw materials, lens parameters, etc.) to understand the effects of fundamental process parameters on the desired output. With advanced analytics dashboards, like the examples below, Intuceo's customers are able to link non-clinical data such as Manufacturing and Design and use collective analysis to make large data sets comprehensible.
