

Improving the speed of relevance of technical knowledge search

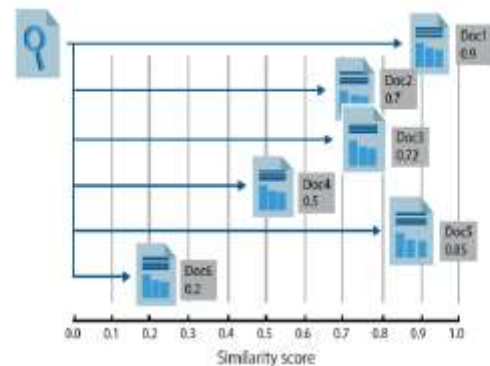

Key Benefits & Features

- The solution lists the 10 most similar documents based on a search query. The total search time has been reduced from minutes to seconds and relevance has been optimized.
- The solution was integrated into the client's enterprise knowledge system.
- The client has knowledge on demand that increases the productivity and capabilities of its engineers, ensures a consistent engineering process, and prevents recurring errors

Intuceo Managed Analytics Solutions for Engineering Productivity

- With 94,344 documents provided by the client, 10,000 were used to develop a model that quickly and accurately searched unstructured data in k-pacs.
- The Intuceo team stemmed related terms, removed unnecessary punctuation, replaced original content with dictionary terms, constructed a tf-idf matrix and filtered out terms that did not occur frequently across documents

The  **Predictive Analytics Platform** utilizes open source big data technologies with accelerators for Data Engineering, Predictive Analytics, and Visualization solutions to solve complex Business Challenges
